A detailed map of the North Atlantic Ocean and surrounding landmasses. The map shows the United States, Canada, Mexico, Europe, and Africa. Major cities like New York, London, Paris, and Rome are labeled. The map also shows the Gulf of Mexico, the Caribbean Sea, and the Mediterranean Sea. A red pin is located in the North Atlantic, near the Azores. The map is oriented with North at the top.

Software Product Design and Development I

High Quality Software

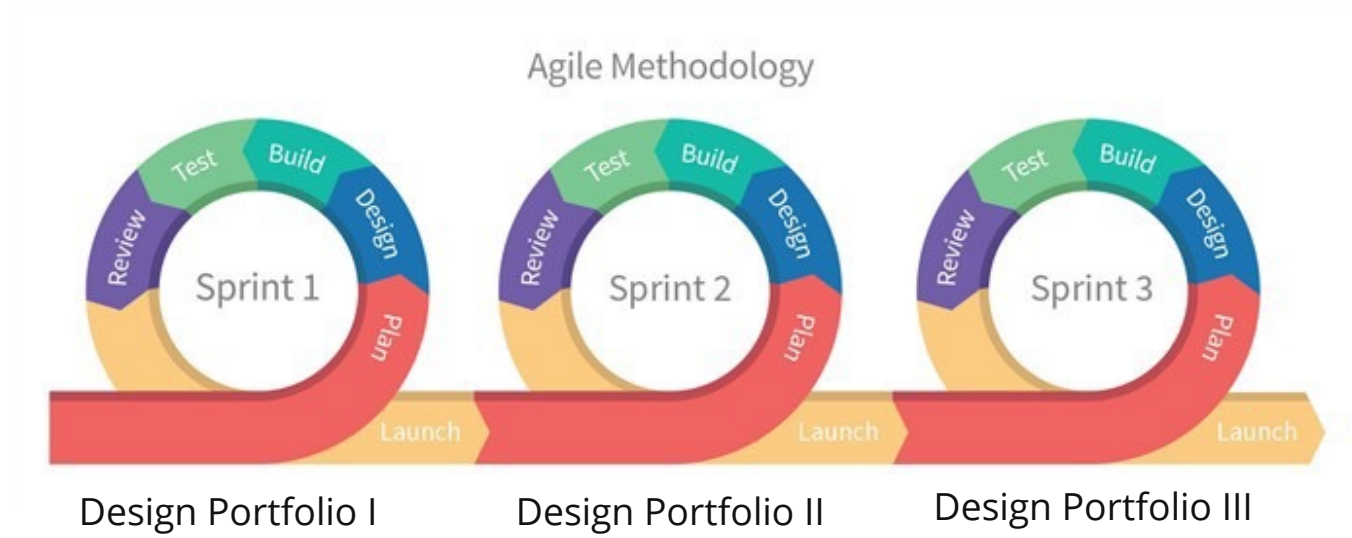

Flexible

Reusable

Maintainable

Collaboratively

Minimum Viable product (MVP)

- During the DP we will focus on developing a MVP
- An MVP is the minimal thing that you can do to test a value hypothesis and gain learning and understanding
- MVP is focust on learning, not delivery
- At the end of each MVP, you decide whether to pivot or persevere
- Let us explain this with an example

Minimum Viable product (MVP)

Customer wants a red car

Iteration 1

Iteration 2

Iteration 3

Iteration 4

- Customer got exactly what they asked for
 - the dev team was just following a plan.
- Team does not understand the value of MVP

No feedback

Valuable feedback on every iteration

- Customer got what they desired
 - Worked iteratively with the dev team.
- developed something a little bit different but it's closer to what the customer really wanted.
- Giving the customer what they really want is the main purpose of delivering an MVP.
- A minimal viable product is a tool for learning.

Survey Results – Team Challenges

Qn.6: Please rank the following challenges that could have impeded effective teamwork.

Qn.7: If your ranking for "Others" in Qn.7 above was 4 or 5, kindly provide us what it represents.

[R2]. **Others** -- People simply not doing work. We only had **about half of our group** contribute anything meaningful to the project. The half of the group that were not participating made it hard for the group to progress collaboratively.

What is social coding?

- Open source practice - Open Source for Inner Source
- All repositories are public
- Everyone is encouraged to contribute
- Contribute back via Pull Requests

Git repository guidelines

- Create a repository for a project
- Create a new branch for every issue
- Use a Pull Requests to merge to main
- Every Pull Request is an opportunity for code review

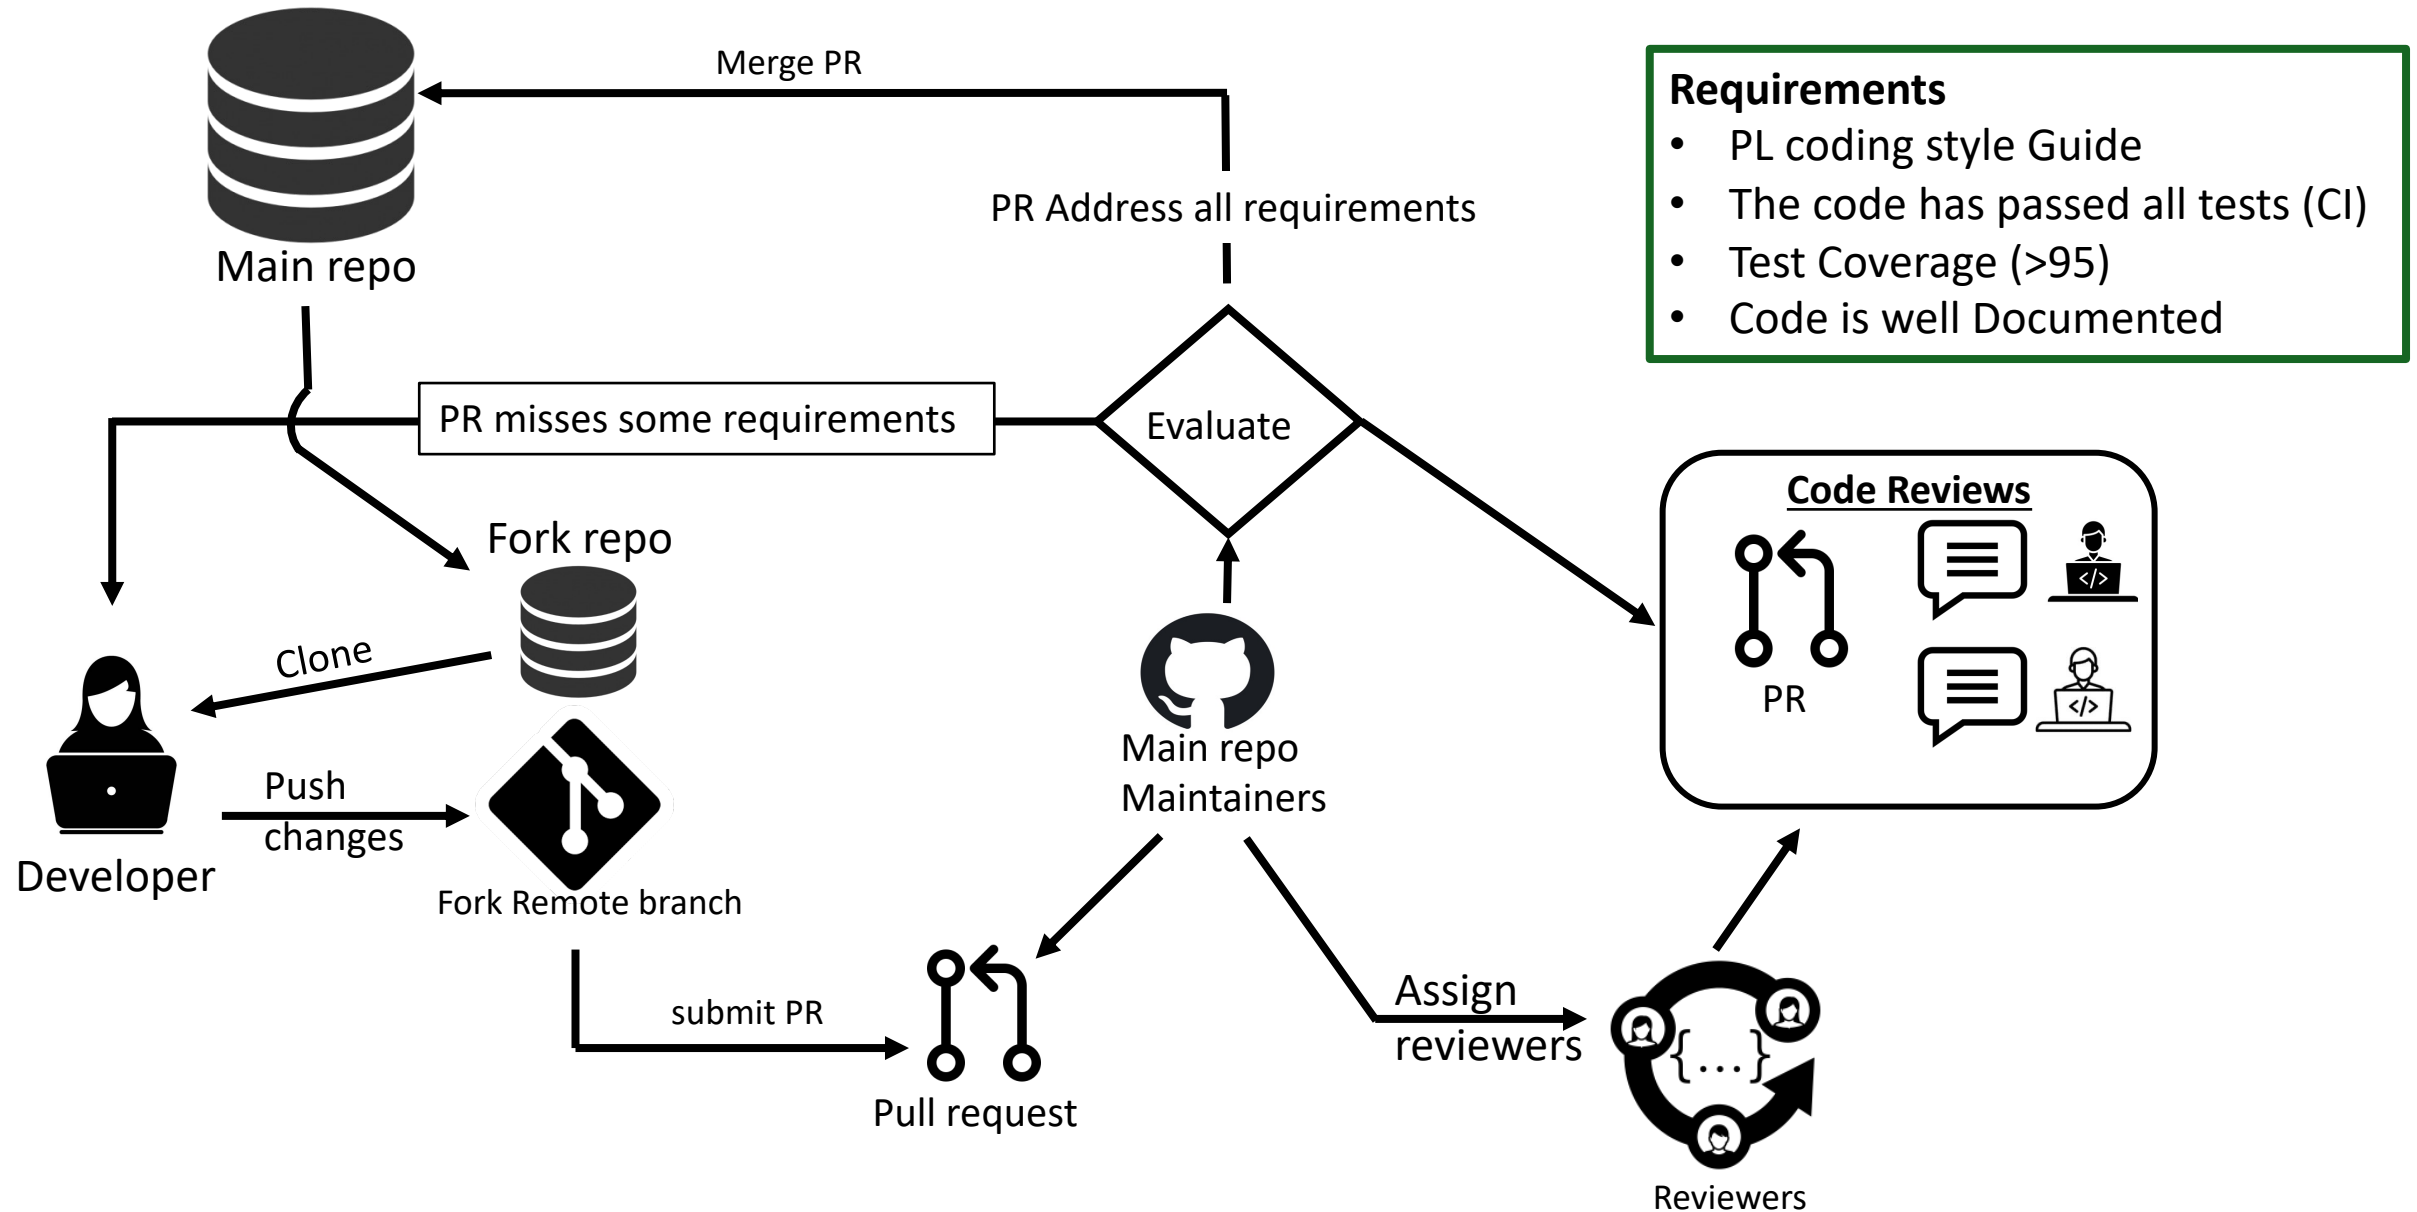

Git Feature branch workflow

Concatenate query strings of queries/search types properly when exporting.

#14284

Merged dennisoelkers merged 5 commits into `master` from `fix/issue-14268` 2 weeks ago

Note: This needs to be backported to 4.3 and 5.0.

Description

Motivation and Context

This PR is fixing an issue related to exporting a search type. When both the search type and the query contain query strings, they are being concatenated, by simply combining them with an `AND`. For simple query strings this works, but it changes the logic for more complicated ones (e.g. when query string1 is `foo OR bar` and the second is also `foo OR bar`, the resulting query string `foo OR bar AND foo OR bar` has a different meaning, due to the stronger binding of the logical AND.

With this PR, concatenating two query strings wraps them in braces too, so `foo OR bar` concatenated to itself ends up as `(foo OR bar) AND (foo OR BAR)`, which returns the same, correct results.

Fixes [#14268](#).

Types of changes

- ☒ Bug fix (non-breaking change which fixes an issue)
- ☐ New feature (non-breaking change which adds functionality)
- ☐ Refactoring (non-breaking change)
- ☐ Breaking change (fix or feature that would cause existing functionality to change)

Checklist:

- ☒ My code follows the code style of this project.
- ☐ My change requires a change to the documentation.
- ☐ I have updated the documentation accordingly.
- ☒ I have read the **CONTRIBUTING** document.
- ☒ I have added tests to cover my changes.

Issue Tracker - GitHub

The screenshot shows the GitHub interface for the Microsoft/TypeScript repository. At the top, there's a navigation bar with the GitHub logo, a search bar, and links to Explore, Gist, Blog, and Help. Below this, the repository name 'Microsoft / TypeScript' is displayed, along with statistics for Watch (142), Star (1,564), and Fork (82). The 'Issues' tab is selected, showing a list of open issues. The first issue is 'Request to expose zeroType, emptyStringType and isTypeAssignableTo on the TS TypeChecker', marked as a 'Suggestion'. The second issue is 'Compiler incorrectly caches module resolution if we use a custom ts.SourceFile & ts.Program cache', also a 'Suggestion'. The third issue is 'Enable strictFunctionTypes', marked as a 'Breaking Change' and 'For Uncommitted Bug'. The fourth issue is '{@link https...} inside a @remarks causes error TS2304: Cannot find name 'https'', marked as a 'Bug' and 'Help Wanted'. The fifth issue is 'Create new interfaces to provide asynchronous versions for the user customizable functions in SolutionBuilder and SolutionBuilderWithWatchHost', marked as a 'Suggestion'. A red box highlights the '107 Open' and '333 Closed' issue counts at the top left of the issues list. Another red box highlights the user profile picture and comment count (190) for the third issue.

Testing

“If it is worth building, it is worth testing.

If it is not worth testing, why are you wasting your time working on it?”

Scott Ambler, agiledata.org

Importance of test coverage

- High test coverage gives you confidence that your code works as expected
- Test coverage reports can reveal which lines of code were not tested

Python cmd tool

```
